TO: MCDOT

FROM: James Hartman, P.E.  
Permitting, Construction, & Inspections Division Manager

SUBJECT: Construction Bulletin for Signing and Striping Inspection

The Permitting, Construction, and Inspection Division (PC&I) hereby announces the immediate change of inspection responsibilities for the signing and striping of all construction related projects. Except for the striping layout of "no passing zones" the PC&I Division, or the project's Construction Management Consultant, will now inspect and accept the signing and striping for both the Transportation Improvement Program (TIP) and Maintenance Improvement Program (MIP) construction projects.

The responsibility for determining sight distances and striping layout for "no passing zones" will remain with Traffic Development Branch.

During the development of each TIP project the need for striping layout for "no passing zones" will be determined and a note will be added to the plans and special provisions to contact the Traffic Development Branch to schedule striping layout.

For MIP and Article 3 projects the project planner will coordinate with the Traffic Development Branch to determine the need for "no passing zone" layout during the scoping phase of the project. For Article 3 projects a note will also be added to the special provisions to contact Traffic Development Branch to schedule layout.
